adownie@guardrisk.co.za

What do we specialise in?

Guardrisk Marine provide specialist expertise in the underwriting of; Marine cargo insurance (including stock throughput) and Goods in Transit Insurance (including a product for road hauliers)

Product offering

Cargo Insurance

A business solution to risk for the Cargo Owner covering:

- Imports
- Exports
- Stock
- Inland Transit

For cost conscious cargo owners, the advantages can be summarised as follows:

- Competitive yet sustainable premiums
- Bespoke policy wordings that have stood the test of time
- Premium financing on request
- Ease of use

Freight Operations

We have a specific product designed for the Freight Operator:

- A product aimed at the larger Freight Operators who have high volumes of sustainable premium paid into a structured facility
- The small to medium Freight Operators where there is no structured facility and premium is paid 100% to insurers

These products have the widest possible policy wording available in the market.

Road Transporters "Liability"

We understand that Transporters/ Road Hauliers are at the heart of the supply chain management system. Their role is often pivotal in the movement of goods within South Africa and across our borders. Guardrisk Marine have developed a holistic solution aimed for transporters risk. This product provides Goods in Transit insurance, carriers liability cover, pollution liability cover, tarpaulin and packing material over to the transporter.

The risk and responsibility of the goods change hands in their process to reach its final destination. This is where a comprehensive Insurance policy is required by the Transporter/ Broker to ensure that the risks assumed through the venture are adequately catered for.

Perishables

Perishables such as fruit, vegetables, meat and flowers are temperature sensitive and therefore require very special solutions in terms of the risk relative to the movement of these good through the supply chain. We are able to tailor solutions to specific requirements of each segment emerging from very basic cover at competitive pricing to the most comprehensive cover, catering for risks such as;

- Variation in temperature however caused
- Delay beyond the control of the insured
